

HOLOGRAPHIC TECHNOLOGY

3D Hologram stand is an interior video projection system, creating a realistic holographic image visible in a 360° angle. It can combine sound and picture and is placed at Malls, Supermarkets, Multi stores, Multiplex cinemas, Airports, Exhibitions and Conferences. It is flexible, interactive, and projects logos, products, videos, human bodies and characters.

3D Hologram desktop allows a 3D projection with sound, and can display products, logos, titles or people, as a hologram. The image is visible in a 360° angle, combined with the real product.
